

Curriculum Proven to Improve Math Test Scores

Fully implementing Schools have increased scores on state and national standardized math tests by an AVERAGE by 15.2%

Curriculum is Fun and Easy to Implement

- Classroom teachers implement
- 20 minute lesson weekly
- No consumables to buy
- Support and training services to assist teachers to fully implement
- Test Preparation units to help students master standardized math tests

Full Suite of Training

STANDOUT Math has trained over 5,000 teachers across the United States. We can train your teachers at your school or at one of our training centers.

At STANDOUT Math we have been helping Kindergarten through 6th grade students raise their understanding and retention of math vocabulary for over 10 years. We know that our approach works...we have helped schools across the country raise standardized test scores by an average of 15% the first year they implement our curriculum. Our proven approach of combining oral, visual and kinesthetic aspects in each of our lessons makes it fun for students to learn. Implementing STANDOUT Math in your school is simple...We train your teachers to deliver our fast-paced, math vocabulary lessons in their classrooms. Our easy to teach lessons last for 20 minutes, one time per week, and are done continuously throughout the school year.

To complement our curriculum, we offer a full suite of training and consulting services to ensure your teachers are implementing the curriculum to generate the most impact. We can train your teachers using a variety of approaches including: in your building, at one of our offsite training locations, or via web-based technologies in 2 days. This gives them the skills and confidence they need to implement STANDOUT Math in their classroom. We also offer Implementation Check sessions where one of our trainers observes a teacher delivering the curriculum and offers feedback for improvement. The teachers we train have great things to say about our curriculum and its impact on the students they teach.

"Great, fun, training! Unlike any training I have attended and I can easily apply this to my classroom"

"Students are excited about math. The STANDOUT Math chants we use directly relate to what we are doing in class. It really works!"

At STANDOUT Math we offer several components to our curriculum to help students master math vocabulary. These components can be implemented individually or as a complete supplementary math vocabulary program.

The components of our program include:

- **STANDOUT Math Curriculum:** our easy and fun to implement curriculum helps students master math vocabulary through a series of chants, and songs that are combined with physical movement. The curriculum is targeted at K/1, 2/3 and 4/5 grade level specific topics.
- **STANDOUT Math Curriculum Training:** This 2 day training session is designed to train teachers to be experts in implementing STANDOUT Math in their classrooms. Training is targeted at K/1, 2/3 and 4/5 grade level teachers.
- **School Assemblies:** these are delivered by a STANDOUT Math trainer to your entire 3rd, 4th and 5th grade levels. For maximum impact, Assemblies are delivered right before students take their annual standardized tests to reinforce memorization and retention of grade level specific math vocabulary terms and math facts.
- **Math Camps:** These 3 day intensive sessions are targeted at students that are partially proficient in math with the goal to get them to become proficient. During Math Camps, 15 students spend 3 days with a STANDOUT Math trainer to master math vocabulary.
- **Implementation Checks:** a STANDOUT Math trainer will observe classroom teachers to ensure they are delivering our curriculum most effectively. This can be done via web-based technologies or by having a trainer visit your classrooms.
- **Computational Manuals:** This resource is utilized across a school to help students in 3rd through 6th grade master their math facts.
- **Test Preparation Units:** This resource is a compilation of grade level test release items that will ensure students are ready for standardized tests. Teachers review 10 lessons with students to ensure students have covered all the material they will be tested on. It is available for 3rd through 6th grade levels.
